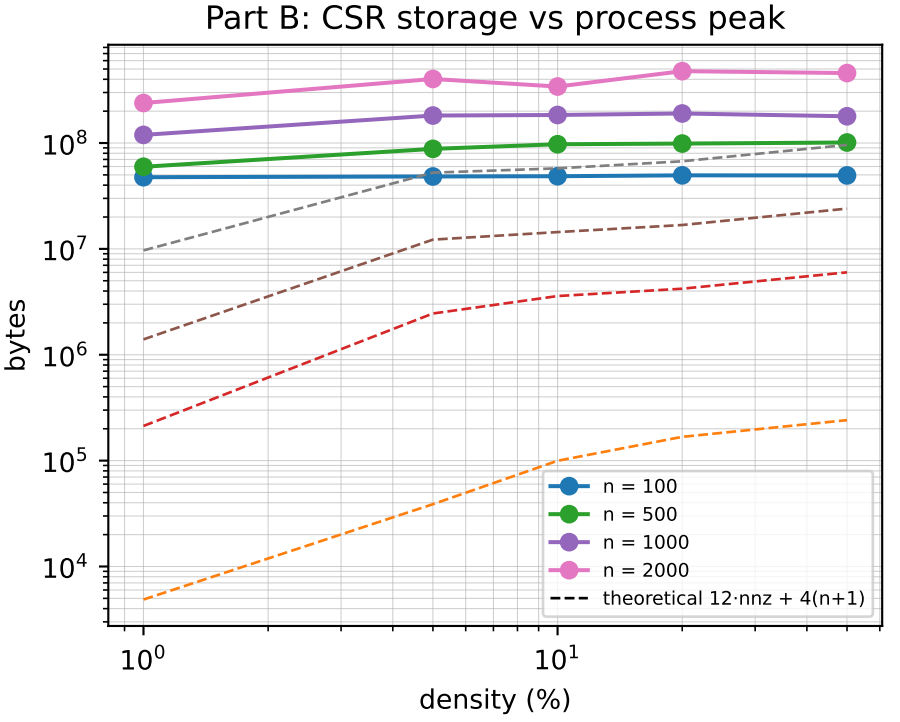
Part A: dense storage vs process peak
bytes
matrix size n
theoretical 24n²
peak RSS baseline i-j-k
peak RSS i-k-j reordering
peak RSS cache blocking (64)



Part B: CSR storage vs process peak
bytes
density (%)
n = 100
n = 500
n = 1000
n = 2000
theoretical 12·nnz + 4(n+1)
